📍 House No. 7, Raepur, Ujiarpur, Samastipur, Bihar – 848132, India

Education

Indian Institute of Information Technology Bhagalpur

Bachelor of Technology in Computer Science and Engineering (CGPA: 9.43)

Nov 2022 – Jun 2026

Bhagalpur, Bihar

Experience

Kookar AI (Paid)

AI Product Analyst Intern

24 Jul 2025 – 25 May 2026

Gurugram, Haryana

- Replaced the standard RAG pipeline with a custom retrieval architecture, improving production chatbot fetch accuracy from 48% to 95% and reducing hallucinations.
- Shipped the AI agent pipeline end-to-end – multi-step tool orchestration in LangChain with structured output parsing, serving production traffic from day one.
- Decomposed a tightly-coupled monolith into modular services with clear API boundaries, enabling independent deployments and parallel feature development.
- Automated QA pipelines using n8n workflows and regression scripts, eliminating manual test cycles and catching regressions before each release.

Fento (Paid, Part-Time)

Fullstack Developer - Intern

13 Sep 2024 – 14 Jan 2025

Remote

- Developed the cross-platform mobile app from scratch in React Native, integrating 20+ REST endpoints and decomposing the backend into modular services.
- Stood up the serverless backend using Node.js, MySQL, and AWS Lambda – from database schema to production release.

BotGauge (Paid)

Frontend Developer Intern

12 Feb 2024 – 12 May 2024

Remote

- Shipped core frontend modules for MVP launch in React.js and Redux, directly contributing to the product going live on schedule.
- Implemented real-time data streaming over WebSockets, replacing polling-based updates with sub-second UI synchronization.

Projects

Janus | *Go, PostgreSQL, Redis, Lua, Docker, REST API*

- Designed a distributed job admission microservice in Go with sub-millisecond latency, using Redis Lua scripts for high-throughput request processing.
- Implemented atomic Token Bucket rate limiting supporting 10K+ jobs/sec with multi-level quotas (global, tenant, dependency).
- Engineered all-or-nothing batch processing with zero-downtime policy reloads via PostgreSQL pub/sub under concurrent writes.

Pine | *React, TypeScript, Go, PostgreSQL, Redis, AWS Bedrock, Docker*

- Created a full-stack AI journaling app in React/TypeScript and Go with JWT auth, email OTP, and Redis-backed session caching; deployed as containerized services.
- Integrated Claude via AWS Bedrock to power AI features including reflections, mood analysis, semantic search, and weekly recaps; instrumented with LangSmith for LLM observability.

Skills

Core: Data Structures, Algorithms, System Design, Distributed Systems, Object-Oriented Programming

Languages: Go, Python, C/C++, JavaScript, TypeScript

Backend & Infra: Node.js, Express.js, Redis, PostgreSQL, MySQL, MongoDB, Docker, REST APIs

Frontend & Mobile: React.js, React Native, HTML, CSS, Redux

Cloud & Tools: AWS, GCP, Git/GitHub, LangChain, LangSmith, n8n

Achievements

- Knight on LeetCode with 800+ problems solved across platforms.
- Ranked 2nd in the graduating batch of 2026 at IIIT Bhagalpur.
- Gold Medal for highest score among 600+ candidates in CBSE Class XII board examinations.
